

Generating the URL for dynamic installation

- Open your One-Drive account. The account should be from personal mail id and not the microsoft account.
- Upload the models/weights/biases/vocab to the account.
- Right click on the file and click on Embed and then click on generate to generate the HTML code to embed the file
- The code generated would be something like:

```
<iframe  
src="https://onedrive.live.com/embed?cid=5A2422E9BC531381&resid=5A2422E9BC531381%21160&authkey=AAIkar6yAKcad1k" width="98" height="120"  
frameborder="0" scrolling="no"></iframe>
```
- Just trim the link, taking only the part inside “..” and replace “embed” by “download”. In the above example it will produce:

```
https://onedrive.live.com/download?cid=5A2422E9BC531381&resid=5A2422E9BC531381%21160&authkey=AAIkar6yAKcad1k
```
